Additional information: The association has been constructing a 2,000 liter distillation plant for production of essential oils, which became operational in 2006. It will primarily distill the plants available from cooperant's cultivated fields in Banja Luka region: peppermint, chamomile, lemon balm, angelica, dill. Of all wild raw materials being collected the most important ones for distillation process are juniper and conifer needles.

Soon after making the distillation plant operational, the association will be able to offer essential oils of the above listed plants to the market.

"Roing" is a private company founded in 1993. The main activity of the company is production, processing and packaging of food products. "Roing" started production of spices and medicinal and aromatic plants in Herzegovina in order to take advantage of the long and warm growing season, branched network of streams in the Neretva river catchments and an ecologically clean area. Besides production on their own fields, production through the cooperants is also expanding. Products are of high quality, which is confirmed with acknowledgements from fairs and Institutes for quality determination. "Roing" sells its products in local and international market (exporting since 2005).
